

WAGMI

\$WAG

NO LEASH. ONLY CHAOS.

WAGMI • \$WAG • SOLANA MEME COIN

PRE-LAUNCH WHITEPAPER • VERSION 1.0 • SEPTEMBER 2026

1. Executive Summary

\$WAG is a community-driven meme coin concept being prepared on the Solana network. The project is built around the WAGMI dog mascot, internet culture, memes, community participation, and a growing set of community experiences. The guiding identity is simple: **No Leash. Only Chaos.**

WAGMI is being built in public. The official website currently identifies the project as **launching soon**; the contract address, final supply, buy/sell mechanics and liquidity details are intentionally unpublished until the final token configuration is confirmed.

Core Principles

Principle	What it means
COMMUNITY FIRST	Memes, creators, games and participation are central to the project.
TRANSPARENCY	Unconfirmed token parameters are not presented as final facts.
SOLANA NATIVE	The project is being prepared as a Solana SPL token.
BUILD IN PUBLIC	Progress and official links are intended to be published through verified channels.

Current Status

Phase 1 — The Stray / Launch Preparation. The current roadmap focuses on the website and brand reveal, community channels, meme campaigns and launch preparation. Phase 2 moves toward DEX launch, verified liquidity setup, chart/discovery visibility and an initial holder milestone.

This is a pre-launch edition. Any field marked TBA is deliberately left open until the team confirms the final launch configuration.

2. The WAGMI Identity

WAGMI is designed as a meme-first community project rather than a promise of financial performance. The brand uses a distinctive dog mascot, purple/black/gold visual language, and a rough, chaotic internet-native tone.

The Pack Hub

The project website describes a central **Pack Hub** for community activity, games, progress, official links and confirmed token information. This gives newcomers a single place to distinguish official information from unverified third-party claims.

Community Experience

MEMES	ARCADE	PROGRESS
Creator-friendly meme culture and community campaigns.	The WAGMI Maze gives the community a lightweight game experience.	Roadmap phases communicate what is live, next, and still planned.

A Community-First Utility Layer

The utility narrative is centered on community participation: the Pack Hub, games, memes, creators, contests and future community utilities. The roadmap also leaves room for merchandise concepts, creator campaigns, global meme contests and future brand collaborations.

Important: These are roadmap directions, not guaranteed deliverables or financial benefits.

3. \$WAG Token Framework

The final token configuration has not yet been published. The website states that supply, mint-authority details, buy/sell mechanics, and liquidity-lock or LP-burn information will be published only after the final configuration is confirmed.

Known Configuration

Item	Current status
Token	\$WAG
Network	Solana (SOL) / SPL
Contract Address	TBA — not launched yet
Total Supply	TBA
Buy / Sell Tax	TBA / mechanics not finalized
Liquidity Setup	TBA — verified details to be published after launch
Mint Authority	TBA — final configuration to be confirmed

Transparency Standard

WAGMI will treat the official contract address and final token parameters as high-trust information. The website directs users to wait for the official contract to be pinned in verified channels and updated on the website.

No unofficial contract address should be treated as the WAGMI token.

4. Roadmap — The Chaos Blueprint

The roadmap is organized as four stages. It communicates direction rather than a guaranteed schedule.

PHASE 1	THE STRAY	CURRENT
Website & Brand Reveal Community Channels Meme Campaigns Launch Preparation		
PHASE 2	THE PACK	UPCOMING
DEX Launch Verified Liquidity Setup Chart & Discovery Push First Holder Milestone		
PHASE 3	OFF THE LEASH	UPCOMING
Market Data Listings Merch Concept Creator Campaigns Global Meme Contests		
PHASE 4	WAG WORLD	UPCOMING
Exchange Outreach Community Utilities Brand Collaborations The Pack Goes Global		

The sequencing follows the current website: preparation first, then launch/liquidity, then broader discovery and community growth.

5. Launch & Discovery Flow

The launch process is built around one rule: **official information should come from verified WAGMI channels**. The website currently withholds the contract address and swap links until official deployment is confirmed.

Pre-Launch

1. Finalize token configuration and deployment parameters.
2. Publish the official contract address only after deployment.
3. Confirm liquidity setup and publish verifiable details.
4. Update the official website with confirmed token information.
5. Coordinate the community announcement across official channels.

Post-Launch Discovery

Once a live market and supported liquidity pool exist, the project can pursue visibility across DEX analytics and market-data platforms. Discovery is a post-launch activity and should not be represented as active trading before a real market exists.

How Newcomers Join

	Get a compatible Solana wallet.
2	Acquire SOL for the network and, when appropriate, trading.
3	On launch day, obtain the official \$WAG contract address from verified WAGMI channels.
4	Use only the official swap link and verify the contract before interacting.

Safety Reminder

Never trust a random direct message, unverified contract address, or unofficial swap link claiming to be WAGMI.

6. Community & Growth

WAGMI's growth model is intentionally community-led. The website emphasizes organic participation, memes, creators, games and public progress rather than paid promises.

Community Pillars

Pillar	Role
MEME CULTURE	Regular meme campaigns, community-created content and recognizable WAGMI branding.
CREATOR ENERGY	Future creator campaigns and global meme contests are part of the roadmap.
GAMES	The WAGMI Maze provides a recurring community activity and a foundation for future arcade ideas.
PUBLIC PROGRESS	Roadmap and official links help distinguish confirmed information from future plans.

Official Information Hierarchy

1) Official WAGMI website → 2) verified Telegram/X announcements → 3) verified on-chain data after deployment. Third-party pages, screenshots, forwarded messages and random DMs should not override the project's official channels.

7. Risk, Disclaimer & Transparency

This whitepaper is informational only. WAGMI (\$WAG) is presented as a community meme project on Solana. It does not constitute an offer, solicitation, financial advice, investment advice, or a guarantee of future value.

Key Risks

- Meme coins and crypto assets can be highly volatile and speculative.
- The token has not launched at the time of this whitepaper edition; final launch parameters remain subject to confirmation.
- There may be no guarantee of liquidity, exchange listings, market value, adoption, or future development.
- Roadmap items describe intended direction and may change, be delayed, or not be completed.
- Users are responsible for verifying contract addresses and official links before interacting with any token or wallet.

Current Official Project Information

Website: thewagmi.netlify.app

Network: Solana

Token: \$WAG

Status: Launching Soon / Phase 1 — Launch Preparation

The official website currently states that the contract address, supply, trading links, buy/sell mechanics, and liquidity details will be published only after the final configuration is confirmed.

NO LEASH. ONLY CHAOS.

Built in public. One step at a time. Welcome to the \$WAG Pack.

Source basis: WAGMI official website, reviewed September 3, 2026. This pre-launch edition intentionally avoids inventing values that the website marks as TBA.
